How to use Base King's Carpet Wall-Base Service:

1. Determine the height and linear feet of carpet base needed for your project including any overage.
2. Take the linear feet needed and divide it by one of the following numbers:

<u>Base Height</u>	<u>Divide by:</u>
3"	47
4"	35
4-1/2"	31
5"	28
6"	23

The number you get is the amount of 12-foot carpet you need to order for carpet wall base (these figures include a percentage to safely get the amount of footage despite minor shortages from the mill, etc...).

3. Order this amount of carpet from the mill and have them put the roll(s) in will call. Then forward your purchase order to us with the following information:
 - a. Height and Amount of Carpet Wall-Base Needed
 - b. Reference/Release Number from the mill
 - c. Plant number to pickup at (if known)
 - d. Approximate date it will be ready
 - e. Any special instructions (i.e. binding color request, routing/delivery instructions, date required)

From there we will pickup your roll(s) from the mill when they are ready and have your job scheduled to be cut, bound, taped, and shipped in a timely manner.

Please feel free to contact Devin Schlisner, Chris Skaare or Everett Schlisner with any questions you may have at 1-888-428-3106.
